Regan Total Return Income Fund UCITS ETF

Reasons to Invest

Quality

Agency residential mortgage-backed securities (RMBS) are backed by either the U.S. government or a government-sponsored entity, doubling as a credit quality enhancement to an overall fixed income allocation.

Gain exposure to U.S. mortgages

At approximately $10.7 trillion, the agency mortgage-backed securities (MBS) market is larger than the entire corporate bond market, offering substantial depth and liquidity. This opportunity gives non-U.S. investors access to one of the largest portions of the U.S. fixed income market.

Income and experience

Income producing fund actively managed by Regan's experienced team, which has been investing in the fixed income space for 14+ years on behalf of their investors.

Product Objectives

Regan Total Return Income Fund UCITS ETF (RMBS) was launched in an effort to meet the demand for low duration, high quality fixed income by providing access to Residential Mortgage-Backed Securities backed by the U.S. Government or its Agencies. The fund aims to outperform traditional cash instruments while maintaining high liquidity in an ETF structure. Senior portfolio managers, with over 40 years of combined experience in the asset class, established Regan Total Return Income Fund UCITS in response to the demand for an active management solution that seeks to outperform traditional products, like money market funds and treasury bills, by investing primarily in agency, floating-rate and fixed-rate residential mortgage-backed securities. This opportunity through a UCITS vehicle enables ease of access to this particular sector of the U.S. investment market.

Key Risks

When you invest in ETFs your capital is fully at risk and may not get back the amount originally invested. Exchange rates can have a positive or negative effect on returns. The value of equities and equity-related securities can be affected by daily stock and currency market movements.
