Lloyd Focused Equity UCITS ETF

Key Features

Companies with strong economics

Selecting companies through a rigorous evaluation process focusing on financial stability, strong superior growth, and strategic market positioning may be beneficial.

Defensive

Selecting quality businesses, and the margin of safety provided by the discount between their market price and long-term earning power value, may mitigate risk of capital loss. Such a portfolio would potentially be suited for a range of economic regimes with potential uncorrelated with the broad economic growth.

High conviction

Allocating higher weight to securities offering the best value given their growth potential and having the most robust business models can result in a high conviction portfolio.

Product Objectives

Lloyd Focused Equity UCITS ETF aims to provide investors with exposure to companies that are of outstanding quality and underappreciated by the market. Companies must demonstrate financial health, characterised by strong annual revenues and substantial market capitalisation. They must also maintain a high operating margin, consistently exhibit positive operating earnings, and show robust returns, either through investment or assets. The Focused Equity ETF tracks the Solactive Lloyd Focused Equity Index CNTR (SFEPNTRC), which targets companies with robust financial fundamentals.

Key Risks

Investors' capital is fully at risk and may not get back the amount originally invested. Exchange rates can have a positive or negative effect on returns. The value of equities and equity-related securities can be affected by daily stock and currency market movements. When you invest in ETFs, your capital is at risk.

Source: HANetf, data as of 30.09.2026. Please note that all performance figures are showing net data. Performance before inception is based on back-tested data. Back-testing is the process of evaluating an investment strategy by applying it to historical data to simulate what the performance of such a strategy would have been. Back-tested data does not represent actual performance and should not be interpreted as an indication of actual or future performance. Past performance for the index is in USD. Past performance is not an indicator for future results and should not be the sole factor of consideration when selecting a product. Investors should read the prospectus of the Issuer ("Prospectus") before investing and should refer to the section of the Prospectus entitled "Risk Factors" for further details of risks associated with an investment in this product. If fund is less than 12 months old, YTD field will be calculated since inception. When you invest in ETFs your capital is at risk.

An investment in an exchange traded product is dependent on the performance of the underlying asset class, less costs, but it is not expected to track that performance exactly. The Products involve numerous risks including among others, general market risks relating to underlying adverse price movements in an Index (for ETFs) or underlying asset class and currency, liquidity, operational, legal and regulatory risks. In addition, in relation to Cryptocurrency ETCs, these are highly volatile digital assets and performance is unpredictable.
