Alerian Midstream Energy Dividend UCITS ETF

Reasons to Invest

Yield Enhancement

MLPs pay no taxes at the entity level so they can pay out more of their cash flow to investors as distributions.

Defensive Energy Exposure

Given the fee-based nature of midstream, cash flows are less sensitive to commodity price volatility compared to other sectors of energy, such as oil and gas producers.

Stable Cash Flows

Midstream companies are largely fee-based, volume-driven businesses that benefit from the growing US and Canadian energy production and rising demand domestically and internationally.

Fund Objectives

Alerian Midstream Energy Dividend UCITS ETF (MMLP) aims to provide diversified exposure to midstream energy companies involved in the processing, transportation and storage of oil, natural gas and natural gas liquids in the US and Canadian markets. The midstream energy ETF includes both master limited partnership companies (MLPs) and C-corps. MMLP is the first UCITS ETF to provide exposure to the energy infrastructure sector. By employing a synthetic strategy, the midstream energy ETF enables efficient replication of the index.

Key Risks

Energy infrastructure companies may be subject to specific industry and sector risks such as commodity price fluctuations and decrease in demand for energy during a recession. While there is no legislation currently aimed at MLPs, a removal or alteration of MLPs; tax treatment could negatively affect performance. The use of swaps as a replication strategy introduces counterparty risk.
